Informatics Student at Telkom University, specializing in software development.
Experienced in designing digital solutions, developing core features, and integrating services. Prioritizes critical thinking, deep analysis, and problem-solving to create optimal user experiences.

Work Experiences

PT Infrastruktur Telekomunikasi Indonesia (Telkominfra) - Jakarta, Indonesia <i>Internship Unit IT & Security Operation Centre</i>	Jul 2025 - Sep 2025
- Assisted in IT system documentation aligned with ISO standards to support compliance and operational consistency. - Conducted testing and analysis of internal applications to ensure functionality, security, and reliability. - Developed mockups and design prototypes for internal systems to improve user experience. - Created Standard Operating Procedures (SOPs) and maintenance checklists for IT infrastructure. - Designed a professional logo and visual identity for the IT & Security Operation Centre unit. - Supported data governance activities, including structured documentation and reporting.	

Education Level

Telkom University - Bandung, Indonesia <i>Bachelor of Computer Science</i>	Sep 2022
--	----------

Organisational Experience

Carnival 22 - Bandung, Indonesia <i>Event Planner</i>	Dec 2022 - Jan 2023
Hello World 2023 - Bandung, Indonesia <i>Event Planner</i>	Jul 2023 - Sep 2023
Anniv Insight 2023 - Bandung, Indonesia <i>Secretary</i>	Aug 2023 - Jan 2024
HIMA IF - Bandung, Indonesia <i>Student Affairs Intern</i>	Oct 2024 - May 2024
Federation of Informatics Athlete - Bandung, Indonesia <i>Development and Partnership</i>	Mar 2024 - Mar 2025
Viva La FIA 2024 - Bandung, Indonesia <i>Event Planner</i>	Aug 2024 - Oct 2024
FORTTRAN 2024 <i>Liaison Officer Coordinator</i>	Jul 2024 - Nov 2024

Skills, Achievements & Other Experience

Payplus (2024): Designed PayPlus, a digital wallet application aimed at helping users manage their finances effectively. I was responsible for developing authentication features by creating login and signup pages, as well as implementing the transfer functionality. Utilized JSP, JavaScript, HTML, CSS, and TailwindCSS, and applied session-based authentication methods to ensure a secure and user-friendly system. Image Recognition for Adjwa & Medjool (2024): Collaborated with a team to design and develop a machine learning model based on K-Nearest Neighbors (KNN) to classify Ajwa and Medjool date varieties. Actively contributed to coding logic, preparing comprehensive documentation using Jupyter Notebook, and conducting in-depth evaluations to measure the model's accuracy and reliability. Adikara (2025): Designed AutoChef, a chatbot-based software that leverages Transformer architecture to provide Indonesian recipe recommendations based on available user ingredients. Collaborated with a team to define core features, interface structure, and service integration, including the use of Firebase and Flutter for application development. Sipena (2026): Developed Sipena, a comprehensive web-based academic administration system designed to streamline the generation and approval of official documents. I was responsible for architecting the full-stack solution, implementing dynamic document generation (PDF/DOCX) features, multi-level approval workflows, and a real-time drafting system. Utilized React, TailwindCSS, Node.js, Express,	
---	--

and MySQL, and applied RESTful API principles with secure authentication to ensure data integrity and operational efficiency.
